Website Portfolio: vincent-delacruz.netlify.app

Summary

Detail-oriented Information Technology graduate (Cum Laude) specializing in full-stack backend logic, LLM systems integration, and data governance. Experienced in building automated rules engines, orchestrating AI model outputs, and translating compliance parameters into secure production guardrails.

Education

Lyceum of the Philippines University Batangas City
Bachelor of Science in Information Technology, Multimedia Technology. GWA: 1.54(Cum Laude) 2022 - 2026
Thesis: "LyceumVault: An Integrated Digital Repository for LPU-Batangas Theses and Dissertations"

Experience

HelloConnect Inc. BGC, Taguig
IT Support Intern Jan 2026 - June 2025

- Programmed automated operational data pipelines using Google Apps Script, reducing manual administrative reporting overhead and data logging times by 40%.
- Troubleshoot application defects and server access handshakes using system log reviews, resolving connection errors to guarantee high application availability.
- Managed agile development sprints and ticket life cycles using Jira, maintaining 100% documentation accuracy and zero untracked bugs across the engineering pod.

AceResto - Thesis Davao City
Project Team Member (Web System Development) Feb 2025 - Oct 2025

- Engineered a high-traffic web booking reservation engine using PHP and JavaScript, validating structural state machines to optimize live resource allocation workflows.
- Configured administrative tracking dashboards using SQL relational queries, enabling interactive, real-time revenue analytics and automated status report extraction.
- Tested cross-origin webhooks and transaction endpoints using network diagnostics tools, eliminating data routing leakage prior to live host deployment.

Lyceum of the Philippines University - Dental Clinic (Dentistry Department) Batangas City
Lead Developer June 2025 - Dec 2025

- Integrated secure third-party data processing endpoints using RESTful API integrations, reducing external identification verification delay by 45%.
- Analyzed system handshakes and connection handovers using MySQL access logs, resolving logical database timeouts to maintain 99.9% uptime during peak hours.
- Authored precise technical system documentation and data schema maps using Markdown, allowing non-technical department stakeholders to interpret data flow and compliance rules easily.

Lyceum of the Philippines University - SLRC (Library Department) Batangas City
Lead Developer Aug 2024 - Dec 2025

- Engineered an asynchronous multi-tier institutional web platform using PostgreSQL and Node.js, cutting manual document verification and processing times by 60%.
- Structured server-side role-based access control (RBAC) layers using Supabase, establishing a strict "if this, then that" data boundary that eliminated unauthorized document access vectors.
- Enforced strict repository branching policies and release changelogs using Git/GitHub, guaranteeing clean pull requests and auditable system-wide codebase histories.

Certificates

AWS Cloud Full-Stack Java Developer Professional Certificate (2026), Google AI Professional Certificate (2026), Google IT Support Professional Certificate (2026), Google Cybersecurity Professional Certificate (2026), CCNA: Switching, Routing, and Wireless Essentials (2025)

Technical Skills & Interest

Languages & Core Concepts: Python, Node.js, JavaScript, Java, SQL (PostgreSQL, MySQL), REST API Architecture
Cybersecurity & Governance: Data Governance, Access-Control Frameworks (RBAC/IAM), Secure Coding Practices, Encryption Logs
AI & Engineering Tools: LLM APIs, Model Parameter Tuning, Prompt Engineering, Git, GitHub, Jira, Supabase
Cloud & Tools: Amazon Web Services (AWS EC2, RDS), Git, GitHub, Jira, Supabase, Windows Server, Linux CLI
Core Competencies: Technical Policy Documentation, Automated Reporting, Audit Logging, Fault Diagnosis, Data Localization
AI Security & Policy-as-Code: Researching autonomous AI agent guardrails, regulatory compliance frameworks (PDPA/DPA), and immutable audit trail logging.
System Architecture Exploration: Building lightweight microservices with Python/FastAPI, writing secure rules engines, and configuring data localization perimeters.
Technical Research: Digging into technical documentation, vendor whitepapers, and software dependencies to trace data flows and isolate architecture gaps.
